12.1 What FBR Receives

12.2 Integration Steps

12.3 Going Live

1

Getting Started

Login, Dashboard & Navigation

1.1 System Overview

The Textile Management System (TMS) is a complete business management solution built specifically for Pakistani textile mills and dyeing industries. It handles the full business cycle: purchasing raw materials, production processing, sales invoicing, inventory management, and FBR-compliant e-invoice submission.

What This System Manages

- Sales Tax Invoices — FBR/PRAL compliant with IRN and QR code
- Customer records with NTN/STR# verification from FBR
- Supplier records and Purchase Orders (PO)
- Stock levels — auto-updated on PO receipt and invoice payment
- Production batches — dyeing, bleaching, printing, finishing
- Accounts and double-entry ledger
- Multi-user access with role-based permissions

1.2 Logging In

- 1 Open the application**
Open your browser and go to the system URL provided by your IT administrator.
- 2 Enter credentials**
Type your Username and Password. These are set up by the Admin user.
- 3 Click Login**
You will be taken to the Dashboard. Your session stays active for 1 day.
- 4 Forgot password?**
Contact your system administrator. They can reset your password from the Users page.

Note: Passwords must be at least 6 characters. Administrators set these in User Management.

1.3 Dashboard

The Dashboard shows your business at a glance. All numbers are live from the database — refreshed every time you open the page.

Card / Panel	What It Shows
Total Products	Count of all products in the system (active + inactive)
Today's Sales	Total value of all invoices dated today (including sales tax)
Pending Invoices	Count of invoices in Draft or Issued status not yet paid
Low Stock Items	Products with 10 or fewer units — configurable in Settings
Recent Invoices	Last 10 invoices with customer name, amount, and status
Stock Alerts	Items running low with current quantity highlighted in amber/red
Production Banner	Appears only when batches are In Progress — click to go to Production
FBR / Company Card	Shows your company STR# and NTN# — or prompts setup if missing

1.4 Navigation

The left sidebar is always visible. Click any item to navigate. The active page is highlighted in purple. Your username and role appear at the bottom of the sidebar.

Menu Item	Purpose
Dashboard	Live business overview
Products	Product catalog and PCT codes
Inventory	Stock levels, warehouses, transactions
Suppliers	Supplier records
Purchases	Purchase Orders (PO)
Production	Dyeing/bleaching/printing batches
Customers	Customer records with FBR verification
Invoices	Sales Tax Invoices
Accounts	Chart of accounts and ledger
Reports	Sales, purchases, inventory, production analytics
Users	User accounts and roles (Admin only)
Settings	Company info, FBR config, stock rules

2

Company Settings

Configure before first use

2.1 Basic Information

Go to **Settings** → **Company**. Fill in all fields. This information appears on every printed invoice.

Field	Description
Company Name	Your registered business name — appears as heading on invoices
Address	Registered business address
Phone	Business phone number
City	City of business
STR#	Sales Tax Registration Number — e.g. 04-05-3200-009-46
NTN#	National Tax Number — e.g. 2212360-1
Email	Business email (optional)
Website	Business website (optional)
Logo	Company logo — appears on printed invoices (PNG/JPG, max 2MB)

Note: STR# and NTN# are mandatory for FBR e-invoice submission. Without them, invoices cannot be submitted to FBR.

2.2 Province & Tax Authority

This is critical for correct tax routing. Select your province — the system automatically sets the correct tax authority.

Your Province	Tax Authority
Punjab	PRA — Punjab Revenue Authority
Sindh	SRB — Sindh Revenue Board
Khyber Pakhtunkhwa	KPRA — KPK Revenue Authority
Balochistan	BRA — Balochistan Revenue Authority
Federal / Islamabad	FBR — Federal Board of Revenue
AJK	FBR — Federal Board of Revenue
Gilgit-Baltistan	FBR — Federal Board of Revenue

Business Type also matters:

Business Type	Tax Routing
Goods	Raw material, fabric, yarn — always FBR regardless of province
Services	Dyeing, bleaching, printing — provincial authority based on your province
Both	Mixed business — handled per invoice

***Note:** Textile dyeing and processing is classified as SERVICES by FBR. If you are in Punjab, your authority is PRA, not FBR. This is exactly the mistake the advocate's client made — the system now prevents it automatically.*

2.3 FBR / PRAL Configuration

Go to **Settings** → **FBR / PRAL**. This section configures the electronic invoice submission to FBR through PRAL (Pakistan Revenue Automation Ltd).

Field	Description
POS ID	Assigned by PRAL when you register your POS system on their portal
POS Serial	Your system's serial number registered on PRAL
API Username	PRAL ITMS portal API username
API Password	PRAL ITMS portal API password
Mode	Sandbox (testing) or Production (live). Always test first.

To Get PRAL Credentials

- Call PRAL helpline: 051-111-772-527
- Ask to register your POS system for e-invoice API
- They will give you POS ID, username, and password
- Log in to PRAL ITMS portal: itms.fbr.gov.pk
- Test in Sandbox mode first before going Live

2.4 Stock Settings

Go to **Settings** → **Stock**. These rules run automatically — no manual action needed.

Setting	Effect
Auto-deduct on Invoice Paid	When invoice status → Paid, quantities are deducted from stock automatically
Auto-add on PO Received	When Purchase Order → Received, quantities are added to stock automatically

Low Stock Threshold

Items at or below this quantity show on the Dashboard as alerts
(default: 10)

3

Products & PCT Codes

Product catalog setup

3.1 PCT Codes

PCT (Pakistan Customs Tariff) codes, also called HS codes, are mandatory on FBR sales tax invoices. Every product you sell must have a PCT code.

Go to **Products** → **PCT Codes**. Examples for textile products:

PCT Code	Description
5208 2100	Woven fabrics, cotton, plain weave, bleached
5208 3100	Woven fabrics, cotton, plain weave, dyed
5209 4100	Woven fabrics, cotton, printed
5513 2100	Woven fabrics, synthetic, plain weave, dyed
3204 1100	Reactive dyes and preparations
3402 9010	Washing, bleaching, scouring preparations

Tip: Ask your FBR tax consultant for the exact PCT codes for your products. Wrong PCT codes can cause FBR to reject your invoices.

3.2 Categories & Units

Before adding products, set up **Categories** (e.g. Grey Cloth, Dyed Fabric, Chemicals) and **Units** (e.g. Metres, Yards, Kg, Litre). These appear in purchase orders, invoices, and stock reports.

3.3 Managing Products

1	Go to Products Click Products in the sidebar.
2	Click New Product Fill in: Name, Category, Unit, PCT Code, and prices.
3	Set prices Wholesale Price and Retail Price — used for stock value estimation in reports.
4	Save Product appears in the list and is available for invoices and purchase orders.

Note: A product must have a PCT Code assigned before it can be used on FBR e-invoices. Invoices can still be created without it but FBR submission will include a blank HS Code.

4

Customers

FBR-verified customer records

4.1 Adding a Customer

1	Go to Customers Click Customers in the sidebar, then Add Customer.
2	Enter NTN or STR# Type the customer's NTN or STR# in the blue verification panel at the top of the form.
3	Click Verify The system contacts FBR and auto-fills: business name, address, city, province, and STR#.
4	Check Province Confirm the province is correct — this determines which tax authority their invoices go to.
5	Save Customer All verified data is saved. A green "FBR Verified" badge appears in the customer list.

4.2 NTN & STR# Verification

This feature prevents the most common and costly mistake in Pakistani sales tax invoicing — wrong province routing which causes the buyer's input tax claim to be rejected.

Feature	What It Does
Verify NTN button	Calls FBR API — returns registered name, address, city, province, STR#
Verify STR# button	Calls FBR API — also detects province from STR# prefix
STR# auto-detect	Province sets instantly as you type the STR# — no button click needed
FBR Verified badge	Green badge in customer list confirms data is from FBR records
Manual entry	Still possible if FBR API is unavailable — province dropdown always available

Note: NTN and STR# verification requires PRAL credentials to be configured. Without credentials, the STR# prefix province detection still works automatically.

4.3 Province & Tax Authority

Province is a **dropdown** — **not a free-text field**. This prevents typing mistakes. The system also shows which tax authority will receive invoices for each customer:

Why Province Matters

- Wrong province = tax goes to wrong authority (e.g. FBR instead of PRA)
- Buyer cannot claim input tax if the invoicing authority does not match their registration
- Buyer's refund gets stuck — as experienced by the advocate's client
- This system eliminates that risk by auto-detecting province from STR# prefix

5

Suppliers & Purchase Orders

Buy raw materials — stock auto-updates

5.1 Managing Suppliers

Go to **Suppliers** in the sidebar. Add your raw material suppliers with their name, address, phone, NTN, and STR#. Mark inactive suppliers as Inactive — they stay in the system for historical records.

5.2 Creating a Purchase Order (PO)

A Purchase Order is a document you create when buying raw materials from a supplier. It records what you ordered, the quantity, and the rate.

1 Go to Purchases

Click Purchases in the sidebar, then New Purchase Order.

2 Select Supplier

Choose from your supplier list.

3 Add Items

For each item: select product, enter quantity and rate. Sales tax rate is optional.

4 Save as Draft

PO is saved. No stock change yet.

5 Confirm

Mark status as Confirmed — indicates you have sent the PO to the supplier.

6 Mark Received

When goods arrive — change status to Received. Stock is automatically updated.

5.3 Receiving a PO — Stock Auto-Update

When you mark a PO as **Received**, the system automatically:

What Happens Automatically on PO Received

- Each item quantity is added to the default warehouse stock
- A Stock Transaction (IN) record is created for audit trail
- The reference "PO-XXXXX" is saved on the transaction
- Previous and new stock quantities are logged
- If a stock record does not exist for the product, it is created

Note: A received PO cannot be deleted — the stock has already been updated. Cancel it first if there was an error, then create a correcting manual stock adjustment.

6

Inventory & Stock

Warehouses, stock levels, transactions

6.1 Warehouses

Go to **Inventory**. Create at least one warehouse before using the system. The first warehouse you create becomes the default warehouse for automatic stock updates.

Tip: Name your warehouses clearly: "Main Store", "Chemical Store", "Finished Goods" etc. Stock is tracked separately per warehouse.

6.2 Stock Levels

The Inventory page shows current stock for every product in every warehouse. Columns shown:

Column	Meaning
Product	Product name
Warehouse	Which warehouse holds this stock
Quantity	Current balance
Unit	Unit of measurement (Metres, Kg, Litres, etc.)
Est. Value	Quantity × Wholesale Price (from product settings)

6.3 Manual Stock Transactions

For corrections or stock counts, create a manual transaction:

Type	When to Use
Stock IN	Add stock — e.g. returns from customer, opening balance
Stock OUT	Remove stock — e.g. damaged goods, samples
Adjustment	Set stock to a specific quantity — for stock count corrections

Note: Stock Transactions are permanent audit records and cannot be deleted. If you make a mistake, create a reversing transaction.

6.4 Stock Alerts

The Dashboard shows items at or below the Low Stock Threshold (default: 10 units). Items at zero show a red pulsing dot. Change the threshold in **Settings** → **Stock**.

7

Sales Invoices

FBR-compliant Sales Tax Invoices

7.1 Creating an Invoice

1	Go to Invoices Click Invoices → New Invoice.
2	Select Customer Choose from your customer list. Name, NTN, STR#, and province are filled automatically.
3	Set Date Invoice date — defaults to today.
4	Set Place of Supply Province where the service/goods are supplied. Auto-filled from customer province. This field is legally critical.
5	Add Items For each item: Description, PCT/HS Code, Quantity (Mtr/Yds), Rate, Tax Rate (default 18%).
6	Review Totals System calculates: Value excl. tax, Sales Tax Amount, Value incl. tax automatically.
7	Save as Draft Invoice is saved. Can still be edited.

7.2 Invoice Status Flow

Status	Meaning & Action
Draft	Created but not yet issued. Can be edited freely.
Issued	Sent to customer. FBR submission happens automatically at this step. Cannot be deleted.
Paid	Payment received. Stock is automatically deducted at this step.
Cancelled	Invoice voided. No stock or FBR effect.

Note: Issued and Paid invoices cannot be deleted. Change status to Cancelled if you need to void them. This preserves the audit trail.

7.3 FBR e-Invoice Submission

When you change an invoice status to **Issued**, the system automatically submits it to PRAL/FBR. This happens in the background — you do not need to do anything extra.

FBR Status	Meaning
Accepted	FBR received and validated the invoice. IRN and QR code are saved.
Error	FBR rejected or connection failed. Error message saved. Invoice is still Issued.
Pending	FBR credentials not yet configured. Configure in Settings → FBR / PRAL.

Tip: If FBR submission fails, the invoice is still saved as Issued. You can retry by checking Settings → FBR / PRAL for configuration errors.

7.4 Printing the Invoice

Click the Print button on any invoice. The print view shows a professional A4 Sales Tax Invoice layout matching FBR's required format:

What Appears on the Printed Invoice

- Company logo, name, address, STR#, NTN#
- Buyer name, address, STR# (if registered), NTN
- Invoice number, date, Place of Supply
- Items table: Description, HS Code, Qty, Value excl. tax, Tax Rate, Tax Amount, Value incl. tax
- Grand totals row
- FBR IRN (Invoice Reference Number) — after successful FBR submission
- QR code — buyer can scan to verify invoice on iris.fbr.gov.pk
- Signature block

7.5 Stock Auto-Deduction on Payment

When you mark an invoice as **Paid**, stock is automatically deducted for every product on the invoice. A Stock Transaction (OUT) record is created with the invoice number as reference.

Note: If stock goes below zero due to insufficient stock, the deduction stops at zero. A warning is logged. Create a manual Stock IN transaction to correct the balance.

8

Production Batches

Dyeing, bleaching, printing & processing

8.1 Creating a Batch

1	Go to Production Click Production in the sidebar, then New Batch.
2	Set Batch Number Auto-generated (e.g. BATCH-0001) but can be changed.
3	Select Process Type Dyeing / Bleaching / Printing / Weaving / Finishing / Washing / Other.
4	Set Dates Start Date (required) and End Date (optional — fill when complete).
5	Add Inputs Raw materials going into this batch — select product and quantity.
6	Add Outputs Finished products coming out — select product and quantity.
7	Create Batch saved as Pending.

8.2 Batch Status Flow

Status	Meaning
Pending	Batch created, not started yet.
In Progress	Processing has started. Click "Start" button.
Completed	Processing finished. Click "Complete" button.
Cancelled	Batch voided. Click "Cancel" button.

Note: Completed batches cannot be deleted — they are permanent production records.

8.3 Batch Inputs & Outputs

Inputs are the raw materials consumed in the process (e.g. grey cloth, dyes, chemicals). **Outputs** are the finished goods produced (e.g. dyed fabric, bleached cloth).

Tip: Stock for batch inputs and outputs is NOT automatically updated — create manual Stock transactions for production movements. This gives you full control over stock timing.

9

Accounts & Ledger

Chart of accounts and bookkeeping

9.1 Chart of Accounts

Go to **Accounts**. Create your chart of accounts before adding ledger entries.

Account Type	Examples
Asset	What you own — cash, receivables, inventory, equipment
Liability	What you owe — payables, loans
Equity	Owner's capital and retained earnings
Income	Sales revenue, other income
Expense	Cost of goods, salaries, utilities, rent

Accounts can have parent accounts to create a hierarchy (e.g. "Cash" under "Assets"). Set **Active** toggle — only active accounts appear in ledger entry forms.

9.2 Ledger Entries

Each ledger entry is either a **Debit (DR)** or **Credit (CR)**. The system tracks running totals and net balance.

Note: Ledger entries are permanent financial records and cannot be deleted. If a mistake is made, create a reversing entry.

Tip: Add a Reference (e.g. invoice number, PO number) to link entries to transactions for easy auditing.

10

Reports

Business analytics and summaries

10.1 Sales Report

Shows all invoices in the selected date range. Key metrics:

Metric	Description
Total Sales	Grand total of all invoices incl. sales tax
Sales Tax Collected	Total 18% sales tax on all issued/paid invoices
Monthly Revenue	Bar chart — revenue per month in the period
Top Customers	Top 6 customers by revenue with bar chart
Invoice Detail	Full table: invoice #, customer, date, status, amounts
Grand Total row	Sum of excl. tax + tax + incl. tax

10.2 Purchase Report

Metric	Description
Total POs	Count and total value of all purchase orders
Top Suppliers	Top 6 suppliers by purchase value
Status Breakdown	Count of Draft / Confirmed / Received / Cancelled POs

10.3 Inventory Report

Metric	Description
Stock Levels	All products with warehouse, quantity, unit, estimated value
Total Value	Sum of all stock estimated at wholesale price
Product Count	Total and active product count

10.4 Production Report

Metric	Description
Batch Status	Count of Pending / In Progress / Completed / Cancelled batches
By Process Type	Bar chart — how many batches per dyeing/bleaching/printing etc.

Completion Rate	Percentage of batches successfully completed
Batch Table	Recent batches with inputs, outputs, and status

11

User Management

Roles, access, and accounts

11.1 User Roles

Each user has a role that determines their access level. Currently all roles have the same access — role-based restrictions can be configured by your developer.

Role	Intended Access
Admin	Full system access — manages users, settings, all modules
Manager	Business management — invoices, reports, purchases, production
Cashier	Invoice creation and payment recording
Factory Worker	Production batch management only
Accountant	Accounts, ledger, and financial reports

11.2 Creating & Managing Users

1	Go to Users Click Users in the sidebar (Admin only).
2	Click New User Fill in: Username (cannot be changed later), Name, Email, Phone, Role, Password.
3	Set Password Minimum 6 characters. User should change it on first login.
4	Activate/Deactivate Use the toggle on each user card. Inactive users cannot log in.
5	Edit User Click Edit to change name, email, phone, role, or reset password. Username is fixed.
6	Delete User Click the red trash icon. You cannot delete your own account.

Note: You cannot delete your own account. To remove an admin, another admin must do it.

12

FBR Integration Guide

Complete setup guide for first-time integration

12.1 What FBR Receives Per Invoice

When you issue an invoice, your system sends this data to FBR through PRAL:

Data Sent to FBR	Source in Your System
Your STR#	Seller's Sales Tax Registration Number
Your NTN#	Seller's National Tax Number
Your Business Name	From Company Settings
Buyer Name	From Customer record
Buyer STR#	Customer's STR# (if registered)
Buyer NTN	Customer's NTN
Invoice Number	Unique invoice number
Invoice Date	Date of the invoice
Place of Supply	Province where service/goods are supplied
HS/PCT Codes	For each line item
Quantities	For each line item
Values	Excl. tax, tax amount, incl. tax — per item and total
POS ID	Your registered POS system ID

What FBR Does NOT Receive

- Stock levels or inventory data
- Purchase orders or supplier information
- Production batches or processes
- Salaries, expenses, or internal accounts
- Any data you do not put on a Sales Tax Invoice

12.2 Integration Steps

1

Verify FBR Registration

Confirm business is registered on FBR Iris portal (iris.fbr.gov.pk) with an active STR#.

2	Call PRAL Helpline Call 051-111-772-527. Request POS registration for e-invoice API. They provide POS ID, username, and password.
3	Enter Company Info Go to Settings → Company. Fill STR#, NTN#, Province, Business Type.
4	Enter PRAL Credentials Go to Settings → FBR / PRAL. Enter POS ID, username, password. Keep Mode = Sandbox.
5	Add .env Credentials Developer adds PRAL_POS_ID, PRAL_USERNAME, PRAL_PASSWORD, PRAL_ENV=sandbox to server .env file and restarts server.
6	Test in Sandbox Create a test invoice. Issue it. Check the invoice record has an FBR IRN number. If yes — working.
7	Switch to Production Change PRAL_ENV=production in .env file. Restart server. Now live.

12.3 Going Live Checklist

☐	Company name, address, STR#, NTN# entered in Settings → Company
☐	Province and Business Type set correctly in Settings → Company
☐	Company logo uploaded
☐	At least one Warehouse created in Inventory
☐	Products added with PCT codes
☐	Customer records added and NTN/STR# verified
☐	PRAL credentials entered in Settings → FBR / PRAL
☐	PRAL_POS_ID, PRAL_USERNAME, PRAL_PASSWORD added to server .env
☐	Tested in Sandbox — confirmed IRN received on test invoice
☐	Switched PRAL_ENV=production in .env
☐	Created one live invoice — confirmed IRN and QR code on printout
☐	Staff trained on province selection and NTN verification process
☐	Changed Django SECRET_KEY in production .env
☐	Set DEBUG=False in production .env

Contact / Resource	Details
PRAL Helpline	051-111-772-527 — For e-invoice API registration

FBR Helpline	051-111-772-372 — For STR/NTN registration issues
FBR Iris Portal	iris.fbr.gov.pk — Manage your FBR tax profile
PRAL ITMS Portal	itms.fbr.gov.pk — Manage POS and e-invoice settings
FBR e-Invoice	fbr.gov.pk/einvoicing — Official documentation
